

Member 3 — Testing Task Card

Owner: [Name / Reg. No.] · **Branch:** test/registration-workflow

Scope

Keep the test evidence small and repeatable. Test from both the automated suite and the browser; report defects with steps rather than changing backend code without agreement.

Files

```
tests/test_app.py
docs/TEST_CHECKLIST.md
```

Tasks

- [] Run `python -m unittest discover -s tests -v` and record the actual result.
- [] Check event creation and public event URL.
- [] Submit one fictional participant and one volunteer registration.
- [] Confirm duplicate IDs, expired deadlines and capacity limits are handled.
- [] Confirm new registrations start as Pending and admin status changes persist.
- [] Confirm dashboard/event counts update and CSV exports the right rows/statuses.
- [] Verify the home hero follows the earliest upcoming event and maps known sports to the expected preset; unknown sports use the arena fallback.
- [] Change an event's Homepage background in admin, save, and verify the next-event hero and dashboard label update; test Auto again.
- [] Check the sports theme at mobile, tablet and desktop widths.
- [] Record any issue with URL, steps, expected result, actual result and screenshot/log.
- [] Retest fixes from Members 1 or 2.

Commands

```
git checkout main
git pull origin main
git checkout -b test/registration-workflow
python -m unittest discover -s tests -v
git status
git add tests/test_app.py docs/TEST_CHECKLIST.md
git diff --cached
git commit -m "test: cover registration review flow"
git push -u origin test/registration-workflow
```

Only mark a test passed after running it. If a step was checked manually, label it as manual.
